**TERMS—PAYMENT WITH ORDER**—C.O.D. orders entail extra expense.

**MARKET GARDENERS**—We are in a position to meet prices offered by other reputable houses and at the same time supply the best varieties suitable for market purposes.

**CONDITIONS OF SALE**—We use every possible effort in the selection of our seeds, and feel justified in saying that ALL OUR SEEDS ARE THE PUREST AND BEST. At the same time many failures with seeds are due to lack of experience and care—planting when too dry or wet, too deep or too shallow, which makes it impossible for us to guarantee success; therefore, in common with all other houses, we give no warranty, expressed or implied, as to description, quality or productiveness of any seeds, plants or bulbs we supply and will not be responsible for the crop. If the purchaser does not accept seeds on these conditions they must be returned at once and money will be refunded.

## DIRECTIONS FOR THE CULTURE OF FLOWERS FROM SEEDS

### HARDY ANNUALS

Sow seed in the open bed or border where they are to bloom. In order to get earlier bloom the seeds may be sown in the hot-bed and transplanted to the open ground.

### HALF-HARDY ANNUALS

Sow seeds in a slightly open hot-bed or greenhouse in pots and pans. Always use good rich soil, composed in the majority of cases of fine loam and leaf mould, or properly decayed manure. Sand may be added, and pans, pots and boxes well "crooked" to promote drainage. Cover all minute seeds very thinly with the finest sifted soil.

Be careful that you neither parch nor drown the seed. Little water is required if the pots, etc., are covered with pieces of glass, which will deter too hasty evaporation. When watering is necessary, it should be done with a fine hose and a light hand, remembering that a strong stream will probably uncover the seed, and possibly wash it away altogether. The glass should not remain on the pots, etc., after the plants appear. Plenty of light, but not very strong and scorching, and a gentle, equable temperature are invaluable. When the young plants are strong enough, prick them off to give them more room; this may be done into other pots, pans and boxes, or into frames. About the end of May plant in open ground that has been well dug and enriched with old hot-bed manure, decayed leaves or some equally efficacious mixture. Give a liberal supply of water when planted.

### HARDY BIENNIALS AND PERENNIALS

Treat same as Hardy Annuals. All these do not bloom the first year. Marked "H.P." in the catalogue.

## « TO OUR CITY CUSTOMERS »

### HARDY FRUIT TREES

It will be noticed from our Catalogue (page 27) we stated we could not supply HARDY FRUIT TREES this Season as we were unable to secure the necessary Hardy-root-stocks. It is also well known that there is a serious shortage of Fruit Trees all over the Dominion due to lack of experienced help during the past few years.

We do, however, have a small number of 3 year old Apple and Crab Apple trees, but not sufficient to list in our Catalogue for general distribution, and these we are offering to City and Rural Customers only. **PLEASE NOTE WE CANNOT PACK AND SHIP TO COUNTRY POINTS.**

If interested, we would ask Customers to call in our Store just as soon as possible, and book their requirements, when same will be reserved. This offer, of course, is made subject to being unsold, as we can only book same until the number we have for disposal is sold.

The 3 year old Fruit Trees we offer have been very costly to produce, they are all in perfect shape and full of life, and we cannot replace them if they are allowed to dry or die back after being received by our Customers. Give them proper attention—planting—shading—and they will grow and produce for you.

All the varieties offered are quite hardy here in Edmonton and District and scores of our Customers who secured same from us during the past 5 or 10 years have had good crops from their Trees.

### APPLE and CRAB APPLE TREES

These Trees are 3 years old, around 6 feet high, and nicely branched. **EACH, \$2.75.**

#### APPLES—

**Duchess.** The fruit is large and sweet. May be gathered and enjoyed right off the tree. A grand variety.

**Melba.** The fruit is Yellow and Crimson and of MacIntosh quality.

#### CRAB APPLES—

**Dolgo.** A variety introduced by Prof. Hansen. Early and a prolific bearer. Fruit medium size of bright red color, and a very showy tree when in fruit.

**Hyslop.** Strong grower with bright red fruit, moderately juicy. Makes a grand showing in any Garden.

We also have a few Whips (2 year old Trees not yet branched) which will branch this Season, in the following Varieties: **EACH, \$1.75.**

#### APPLES—

**Amur.** A very hardy variety and produces juicy fruit.

#### CRAB APPLES—

**Charlemoff.** A Russian Variety which has proved very satisfactory.

**Aukon.** One of the more recent introductions, grand for this District.

### ORNAMENTAL TREES AND SHRUBS

We are cleaning up our Trial Nursery Grounds and will have a few each of many kinds of Trees and Shrubs, which Customers may select in our Warehouse, at the rear of our Retail Store. These Trees and Shrubs are well grown and in splendid shape, but we do not have sufficient to list in our Catalogue.
